**Genetics in Primary Care Institute  
Presents a NEW tablet-based Pediatric Family Health History  
Tool**

[AAP and Partners Present the First-Ever Electronic Pediatric Family  
Health and Genetic Screening Tool](#)

Do you think family history is important but **don't have enough time** to ask all of the questions you'd like to during your patient encounters?

Does your electronic health record **lack** in family history functionality?

Do you think family history is important but need additional guidance to develop actionable **"next steps"** for your patients?

If you answered "yes" to any of the above, this Tool is for you! Learn more about implementing this tool in your pediatric primary care practice with our demonstration webinar!

As you may have already heard, the GPCI, Genetic Alliance, the National Coalition for Health Professional Education in Genetics (NCHPEG), March of Dimes, Partners Healthcare (Massachusetts General Hospital), and Health Resources and Services Administration have developed an electronic pediatric family history tool - available FREE of charge for any pediatric health provider.

The FREE Pediatric Family History Tool functions to help the busy

primary care provider translate family history data for use in clinical care, engages the family as an active participant, and provides a personalized clinical encounter with clinical decision support.

**Did you miss the demonstration webinar?**

[View the recording here](#), and [download a copy of the slides](#).

The purpose of this webinar is to:

1. Recognize the potential patient care benefits of systematic family history collection and assessment
2. Describe the clinical conditions and clinical decision support in the new Pediatric Family History Tool
3. Identify strategies and opportunities for implementation of the tool in your pediatric practice

To learn more about how to implement this free resource in your practice, email [nstevens@aap.org](mailto:nstevens@aap.org) for more information!
